Project Name	Visualizing and Predicting Heart Diseases With an Interactive Dash Board.
Maximum Marks	4 Marks

Exploration Of BP By Age

The database contains of 14 fields. The "goal" field refers to the presence of heart disease in the patient. It is integer valued from 0 (no presence) to 4.

Blood Pressure variation by Age:

Here we need to consider the age as a dimension, because we want to plot the BP values against it. Changing the age from a measure to dimension will allow us to plot all values from BP present in the dataset corresponding to their age.
